

AI Healthcare Diagnosis Report

Patient & Input Details:

Patient name: Kunal

Age: 65

Fever days: 8

SPO2: 95.0

Cough: Yes

Smoking: Yes

Diabetes: No

Predictions:

Image Model Prediction: 0.980

Clinical Model Prediction: 0.923

Fusion Prediction: 0.971

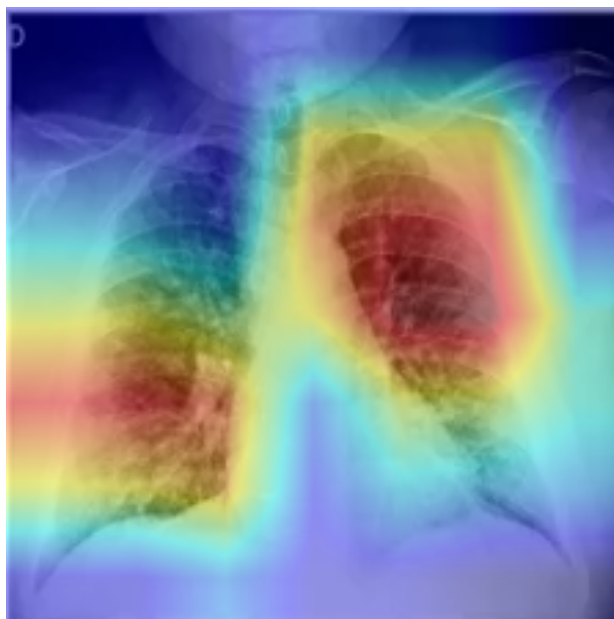

Model Explanation (short):

The image model predicts probability 0.980 and the clinical model predicts 0.923. The fused score (average) is 0.971. The top contributing clinical features (from SHAP) are shown in the SHAP plots. Positive SHAP bars increase the predicted risk while negative reduce it. Please see the SHAP waterfall and summary plots for per-feature detail and relative importance.

Final Interpretation:

The system predicts a **high likelihood of pneumonia**.

- The X-ray shows strong signs of lung opacity.
- Your clinical symptoms also indicate high risk.
- Immediate medical attention is recommended.

Final Prediction:

Fusion probability: 97.1% (0.971)

Risk band: High risk
